Established in 2003

Our mission and purpose at Macleay Landcare Network Inc is to facilitate community endeavours to achieve ecologically sustainable land management and the protection and enhancement of the natural environment.

Our aims and objectives are to :

- Promote sustainable land, water, and vegetation management practices and principles in all areas of the Macleay Valley catchment below the tablelands.
- Assist the existing network of care groups and individual landholders with access to funding, information, and training.
- To assist in the development of timely, relevant, practical projects that assist landholders' efforts with regard to sustainable property management.
- Provide opportunities for training and skills improvement by providing relevant and practical field days and workshops at no or low cost.
- Provide a mechanism to assist local landholders and care groups to develop local projects to meet local needs.
- To act as a conduit for local concerns about natural resource management issues between local communities and government authorities.

Some of our projects include :

Restoration of river banks and habitat corridors

Growing and supplying appropriate Koala food and habitat tree species

Target weeds such as Cockscomb Coral Trees, Cats Claw Creeper and Glory Lily in the Macleay Valley

East Kempsey Arboretum

The creation of native rainforest arboretum that will provide a valuable educational resource for local schools and the wider community

Volunteers are always welcome - a great way to meet new friends and learn about our natural environment
